CHECKLIST

Within Torres del Paine National Park 133 species of birds have been recorded; 22 of these are considered “accidental,” with only one or two sightings.

The number of species that can be seen at any given time will vary due to the fact that some species are migratory, while others are year-round residents. It is also important to know that not all species can be found in all areas of the park; many birds are associated with specific habitats such as forests, rivers and lakes, or prairies.

The following list of birds found in the park is presented in taxonomic order according to the eBird/Clements checklist of birds of the world: Version 6.8, as amended August, 2013
